

Anglo/Brazilian
Northern Mato Grosso Expedition 1967/69

FLORA OF MATO GROSSO

No. R. 380

Combretum fruticosum (Loefl.) Shuntz

3 km. SW of Xavantina.
($52^{\circ}20'W - 14^{\circ}44'S$).

Shrub to 3.3 m, but scrambling over other woody vegetation to greater heights when the opportunity exists. Wings of fruit dullish mauve but look bright russet with the sun shining through them.

Growing on the margins of a dried-up lake.

Date: 17.8.1967

Coll.: J.A. Ratter & J. Ramos.
