

FLORA OF BRAZIL

State of Goiás

No. R. 3247

*Voehysia pumila* Pohl ?

Near Cabeceiras on the Brasília road.

Small shrub, producing new aerial parts every year, with unbranched shoots, in groups of up to 5, reaching 80cm tall (no doubt from a large underground xylopod).

Flowers yellow.

In very sparse campo rujo (grassland with scattered trees & shrubs), the majority of the trees are low specimens of *Salvertia convallarioides*.

Date: 2.7.1976

Coll.: J.A. Ratter, S.G. da Fonseca & J. Fonseca Filho.
