

FLORA OF BRAZIL

State of Mato Grosso

No. R. 5030

Pithecellobium saman (Jacq.) Benth.

On the margin of the Transpantaneira
c. 3 km north of the IBDF base (approx.
120 km from Poconé on the road to Porto
Jofre).

On roadside.

Small, wide-crowned tree, 3.5 m tall,
branched into three trunks from near the
base, each 13 cm d.b.h. Bark fawn with a
vertically elongated reticulate pattern
like Enterolobium ellipticum but not
nearly so thick.

Date. 17. 8. 1984

Coll.: J.A. Ratter
